Expansion

In September, we closed on the purchase of a 10,000-square-foot facility in Boulder. It's almost doubling our space. Get the details in the news release:

MPO Summit

Sterilization on the Mind

This year's MPO Summit lived up – literally – to its name. The conference, which focused on trends and issues in the medical device manufacturing industry, took place at Gaylord Rockies Resort and Convention Center in Colorado, near Denver International Airport. While I did not get to check out the resort's water park, spa or golf simulator, I did appreciate the facilities and space of the conference center.

Quick-turn, short-leadtime needs

What we came away with was that attendees are more than interested in sterilization. Faced with the U.S. Environmental Protection Agency's ruling earlier this year that put in place the strongest measures to date for ethylene oxide (EO) commercial sterilization facilities, many people were interested in our work with chlorine dioxide (CD). [Read more.](#)

Newly published industry articles

[Our](#) executives are regularly featured in top industry publications. In these recent articles, learn more about 510(k) clearance and what medical device companies really need to consider when looking at sterilization methods.
