*Intelligence for today's life science products*

[Development](#) • [Regulatory and Quality](#) • [Sterilization](#)

As we close out the first half of the year, we're seeing that sterilization is leading the list of needs for medical device developers. Looking to get their products to market as soon as possible, they need fast turnaround and the expertise to get the job done as efficiently and cost-effectively as possible. While there's still demand for ethylene oxide service, interest in alternatives – such as chlorine dioxide – continues to rise.

If you're interested in accelerating your product development, send Jeremy Anderson a note at [jeremy.anderson@boulderiq.com](mailto:jeremy.anderson@boulderiq.com). We're fast, agile and experienced – and know how to get results for you.
